My experience as a programmer has given me strong abilities which enable me to solve problems successfully. I possess experience working with JavaScript where I master the syntax and work well with functional and event driven approaches. My understanding at this level enables effective web development because JavaScript remains a dominant language throughout digital projects leading to dynamic site building capabilities.

The goal of achieving Distinction brings me to extend my programming skills past fundamental concepts. My development extends beyond writing code since I train my mind to approach projects from the perspective of software engineering by prioritising scalability, efficiency and maintenance while developing programs. The process requires writers to create well documented clean code while interacting with other developers to receive feedback that leads to improvement. Software developers must excel at both technology focused code execution and team based collaboration. I set my targets above the expected standards to guarantee my coursework success and beyond professional standards in future projects.
